We have adapted the device allowing you to Play/Pause CD

This is a fun karaoke system with a kid-friendly design that brings joy to children and parents alike.

The device features a built-in CD player with repeat function and programmable playback.

As a karaoke system, it comes with two microphone inputs, separate volume controls and an echo effect.

A particular highlight is the interplay between the balance and the adjustable AVC function, which removes the vocals of so-called 'multiplex CDs' when you sing into the microphone. These CDs have two audio tracks: one containing a stereo recording without the singer, and the second with music, backing

vocals and the singer.

Functionality and targeted design makes the karaoke player a beloved device in children's playrooms. The rounded housing entirely omits sharp corners that can result in injury. Via the big volume knob, even smaller hands with fewer motor skills can easily make adjustments to the sound. The carrying handle on the top makes it easy to carry from one place to another. Two dynamic handheld microphones are included in the delivery, allowing you to make instant music right out of the box. Budding artists can give the karaoke system a makeover according to their preferences thanks to the included sticker set.
